

University of Rochester Medical Center Partners with NextGate to Streamline Provider and Organizational Data

Academic Medical Center Leverages NextGate's Automation and Data Integration Capabilities to Centralize and Reconcile Provider Information Across the Enterprise

PASADENA, Calif., August 29, 2017 – NextGate, a global leader in patient and provider identification, announced today the successful go-live of its **Provider & Organization Registry** at the University of Rochester Medical Center (URMC), a leading, integrated academic medical and research facility in Upstate New York.

URMC is the latest organization to implement NextGate's automated platform to aggregate, de-duplicate and reconcile information from participating providers for a single source of reference, resulting in improved operational efficiency, physician satisfaction and care team collaboration.

The NextGate Provider & Organization Registry brings URMC a centralized view of provider data across its clinical network and automates manual, time consuming processes in managing and updating the master provider information system.

"We are honored to support URMC with a seamless integration solution for accurate, real-time provider data to improve the quality, delivery and efficiency of care," said Andy Aroditis, CEO of NextGate. "The availability of reliable provider data is a fundamental component in fostering effective communication and positive experiences among patients, physicians and staff."

NextGate's Provider & Organization Registry will provide:

- Information synchronization across URMC's financial, clinical and credentialing systems.
- Data reconciliation of physician and provider information within the academic medical center's seven source systems.
- A single source of reference for comprehensive demographic and credential information on providers, both individual and institutional.
- Automated updates of provider records to track specialties, locations, languages, hours and ACO affiliation.

"URMC's ability to drive positive outcomes in our community hinges on delivering high quality, well-coordinated care," said Sally Deming, RHIT, Director of Data Integrity at URMC. "We believe NextGate's provider data management tools will help to strengthen our collaboration and standardization resources across our enterprise and extend meaningful and accessible information to all our healthcare stakeholders throughout the care continuum."

About NextGate

NextGate helps connect the healthcare ecosystem by accurately identifying and linking patient and provider data from different applications. NextGate's **iDAS (Intelligent Data Aggregation Server)** solution framework leverages the company's industry-leading identity management technology to organize and relate data from enterprise systems to provide a more complete and accurate view of the total healthcare experience. NextGate's KLAS Category Leader EMPI technology currently manages over 240 million lives and is deployed by the nation's most successful healthcare systems and health information exchanges. For more information, visit NextGate.com.

About URM

URMC is one of the nation's top academic medical centers, with an unwavering commitment to health research that translates into real-world cures. At the center of healthcare delivery at URMC is nationally recognized Strong Memorial Hospital. The medical center also includes a children's hospital and four other hospitals throughout the state. The UR School of Medicine and Dentistry has received almost \$1.3 billion in total research funding and ranks in the top quartile of U.S. academic medical centers in research funding from the National Institutes of Health.
